

INTERFACE+™

A Development Toolkit

Responsive Solutions' **INTERFACE+** unlocks the system for custom applications. Many customers need flexibility and specific workflows that standard solutions cannot offer. Our system was designed to accept web service calls and XML data feeds for custom applications and integration.

INTERFACE+ is a development toolkit that opens the door to integrate with several front or backend systems that are available in the marketplace today. You can now target and manage large corporate business on a global level and offer customized designs and workflows that give you a competitive edge. **INTERFACE+** provides the keys to design, create, and offer an ideal solution that fits your workflow needs as well as your customer's.

Allow your imagination to run wild. You can start saying "yes" to your customers and develop a system that will address all of their needs. With Responsive Solutions, you will now be a mission-critical part of their operation, generating more value added services, profitability and efficiency.

Features/Benefits

- Custom Workflows

The flexible architecture of our system supports custom workflows. Everything from changing the login process to customizing the shipment page can be addressed with our custom solutions. We will work with you to analyze your workflow requirements and develop a plan that meets your needs.
- Custom Designs

Many corporate customers need to have a customized look and feel within the storefront to meet their branding standards. **INTERFACE+** opens the door to change the entire layout and navigation of the site to keep your customers satisfied and maintain consistent branding throughout the site.
- MIS/ERP Connectivity

Save time and minimize errors by connecting on the front or back-end with MIS/ERP systems. A complete end to end workflow will help you create more efficiency for your clients and position you to be more competitive in the marketplace.
- Integration and Enhancements

INTERFACE+ can address many types of integration needs. An example is that Real-Time Shipping Quotes was identified as a customer requirement. We integrated our system with Fed Ex, DHL, and UPS so all items that are placed into the shopping cart receive real-time shipping quotes based on weight and zip code. This custom integration has now become a standard feature of our service.
